

**NEW!**

## ***Surrogate Analysis*** **Reduced Pricing, Lower Quantitation Limit**

Bureau Veritas Laboratories is announcing a price reduction for Surrogate analysis. The 23% price reduction to **\$85/sample** is effective for samples submitted on or after **April 15, 2009**. This price applies to Lactose, Mannitol, Riboflavin, and Naproxen sodium.

In addition to the price decrease, Naproxen now has a **0.2 nanograms/sample** reporting limit.

### **Why perform this type of evaluation?**

Surrogate testing uses a low risk substitute (surrogate) in place of a higher risk active pharmaceutical ingredient (API) to verify the effectiveness of process controls and practices when handling potent materials. Surrogates allow HSE professionals to perform process testing and improvements to specification prior to introduction of a hazardous and/or expensive API.

Bureau Veritas has experienced field consultants available to perform process surrogate evaluations including factory acceptance testing (FAT) and site acceptance testing (SAT) once containment equipment has been installed.

**Great Price. FREE Sample Media. Exceptional Customer Service.**
